July 18, 2017

The Honorable Pat Roberts  
Chairman  
Senate Committee on Agriculture, Nutrition & Forestry

The Honorable Mike Conaway  
Chairman  
House Committee on Agriculture

The Honorable Debbie Stabenow  
Ranking Member  
Senate Committee on Agriculture, Nutrition & Forestry

The Honorable Collin Peterson  
Ranking Member  
House Committee on Agriculture

Dear Chairman Roberts, Chairman Conaway, Ranking Member Stabenow, and Ranking Member Peterson:

The undersigned organizations very much appreciate the thoughtfulness and diligence you and your committee members bring to the work of passing a new bipartisan five-year Farm Bill. Given the breadth and complexity of this undertaking, we want to draw your attention to a proposed provision that is of the utmost importance to our memberships: the establishment and full funding of a robust U.S. Foot and Mouth Disease (FMD) vaccine bank. An outbreak of FMD will have a devastating effect on all of agriculture—not just livestock producers—and will have long-lasting ramifications for the viability of U.S. agriculture, the maintenance of food security and affordability in this great nation and overall national security.

The ability to rapidly vaccinate susceptible livestock in the face of an FMD outbreak is critical. Current FMD vaccine stocks maintained by the U.S. Department of Agriculture’s Animal and Plant Health Inspection Service (APHIS) are woefully inadequate to handle anything more than a very small, localized outbreak. This stock will not allow APHIS to implement its FMD response plan as intended, thereby placing the entire U.S. livestock industry in grave jeopardy. This situation is untenable given the recent global spread of FMD to new countries—some of which are hostile to the U.S.—and the ever-increasing movement of people and goods from around the world to the U.S. Introduction of FMD, be it accidental or an act of bioterrorism, is a growing and very real threat to our nation’s food supply.

We understand that the cost of this request—$150 million per year—is significant. However, this cost must be considered against the projected economic consequences of an FMD outbreak in the U.S. An outbreak of FMD would immediately close all export markets. The cumulative impact of an outbreak on the beef and pork sectors over a 10-year period would be more than $128 billion, according to Iowa State University economists. The annual jobs impact of such a reduction in industry revenue is more than 58,000 in direct employment and nearly 154,000 in total employment. The impact would also be felt across the agriculture sector. Corn and soybean farmers would lose $44 billion and nearly $25 billion, respectively, making the impact on these four industries alone almost $200 billion. And that is just the monetary impact. It must
also be considered that many livestock producers may not be able to recover from these losses, to the severe detriment of rural communities across this country.

These costs can only be mitigated if the U.S. can mount a swift and thorough response once FMD is detected within our borders. Such a response is entirely reliant on having an adequate vaccine bank; there is no other option to prevent these catastrophic losses. Critically, it must be understood that the U.S. needs to make this investment now. Waiting to buy vaccine when we need it is not an option—current world production is committed to other countries, and vaccine simply won’t be available to us unless we start building this capacity now.

Our organizations are eager to work with you to pass a 2018 Farm Bill that addresses this critical gap in our national security. We appreciate your support of our, and associated, industries.

Sincerely,
